EDUCATION

Cornell University

Ithaca, New York

Bachelor of Arts in Computer Science and Cognitive Science | GPA: 3.87

Aug 2024 – May 2028

Relevant Coursework: Object Oriented Programming & Data Structures, Computer Systems, Algorithms, Discrete Structures, Artificial Intelligence, Computer Vision, Functional Programming, Data Science, Android Development

Clubs: DesignAI Research Group, Digital Technology & Initiative (DTI) Project Team, Association of Computer Science Undergraduates (ACSU) Webdev Officer, Women in Computing at Cornell (GirlsWhoCode Instructor), CRU

Skills: Public Speaking, Teaching/Mentorship, Teamwork, Dependable, Adaptable, Patient, Organized, Cooking/Baking

EXPERIENCE

Software Engineering Intern

May 2026 – December 2026

Apple, Interlinked | AI, React/TS, Swift (macOS/iOS), Python, Redis, Github

Cupertino, CA

- Built & shipped an **MCP** for an internal company-wide Apple AI assistant with **60K+ monthly active users**
- Engineered an end-to-end concurrent audio-synthesis pipeline with multi-speaker TTS models (Gemini TTS), pydub, DSP silence detection, and timestamp alignment to sync a live transcript to playback
- Publishing a cross-platform iOS app and mobile-web support with internal authentication, keychain, iOS accessibility zoom, haptics, liquid glass, and sidebar with gesture recognition

Undergraduate Teaching Assistant

January 2026 – May 2026

Cornell Bowers CIS | OCaml, Dune, React, Express

Ithaca, NY

- CS3110 Functional Programming TA, leading weekly discussion sections of 30+ students, debugging in office hours, and project manager for final projects (explaining recursion, immutability, types/variants, promises)
- INFO1998 Trends in Website Development TA, mentoring student teams on full-stack website development projects
- Debugged complex student implementations and guided design of modular, testable systems

Undergraduate Research Assistant

June 2025 – Present

Cornell Bowers CIS, BURE | Python, JS, Flask/Express, AWS CLI, LLMs, React, Pandas, Plotly

Ithaca, NY

- Researching impact of genAI on constructive learning in writing and 3D modeling tasks to design AI tools
- Implemented a **writing interface** to capture keystrokes and raw user interactions; analyzed keystroke data using LLM prompts made with OpenAI Playground and spaCy models to create interactive data visualizations on Plotly
- Currently creating a **3D interface** on vertical weaving with an AI chat interface and AI decision suggestor

Fullstack Developer

Feb 2025 – Present

Cornell Digital Tech & Innovation Project Team | TS/JS, NextJS, Prisma, TailwindCSS, Supabase, Git

Ithaca, NY

- Developed an all-in-one fundraiser website called **CURaise** for Cornellians to more easily donate and raise money
- Developed server or client components for buyer and seller roles, including referral and fundraiser publication flows
- Innovated a way to integrate Venmo payment confirmation using Mailgun and Cheerio to parse venmo emails

PROJECTS

Rideshare Website | NextJS, ShadCN, TailwindCSS, Firebase, GitHub, VSCode

Jun 2025 – Aug 2025

- Developed a **ride scheduling and assignment system** for a local church of 100+ members, automating message delivery for ride coordination (email and SMS text message)
- Built a multi-user web interface with role-based access control (rider, driver, admin) with secure authentication
- Designed and developed interactive drag-and-drop dashboard to streamline ride organization and user assignments

CS3110 OCaml Battleship Game | OCaml, Dune, GitHub

Aug 2025 – Dec 2025

- Built a multiplayer Battleship game in OCaml using a client-server architecture, enabling concurrent gameplay between multiple users via terminal interface
- Implemented asynchronous client and server communication using Lwt promises, handling turn-based concurrency
- Tested and ensured consistent shared game states across multiple clients, calling modular function components

SHSConnect Communication App | Swift, JS, Firebase, APNS, CocoaPods

Mar 2023 – Aug 2024

- Developed a **messaging iOS app** to foster communication among students and deans as a Swift developer
- Automated push notifications using Firebase Functions to manage FCM tokens integrated with APNS
- Automating mass user creation from CSV uploads to Firestore using Firebase Functions

TECHNICAL SKILLS

Languages: JavaScript/HTML/CSS (7 yrs), Python (7 yrs), Swift/SwiftUI (5 yrs), Java (5 yrs), React (4 yrs), Typescript (3 yrs), SQL (2 yrs), Kotlin (2 yrs), OCaml (2 yrs), C (1 yr)

Developer Tools: Claude Code, OpenAI API, NLP/AI, NextJS/NodeJS, Flask, Express, Git, VSCode, GoogleCloud/Firebase, Supabase, ShadCN, Android Studio, Apple Developer, Postman, Docker, Prisma, Zod, Mailgun

Libraries: Pandas, NumPy, Matplotlib, TensorFlow, Pytorch, Plotly, SciPy, spaCy, Transformers
